

ASV SCAN REPORT SUMMARY

INCERT eTourismus GmbH & Co KG

Author Roman Fojtik
Version 1.0
Date 03/20/2025
Scan # 19450

The image shows a hand holding a pen pointing at a tablet displaying an ASV Scan Report Summary. The report is titled 'ATTESTATION OF SCAN COMPLIANCE' and includes sections for 'Scan Customer Information', 'Approved Scanning Vendor Information', and 'Scan Status'. The background shows a laptop and a desk.

ATTESTATION OF SCAN COMPLIANCE	
Scan Customer Information	
Company	INCERT eTourismus GmbH & Co KG

ATTESTATION OF SCAN COMPLIANCE

Scan Customer Information

Company:	INCERT eTourismus GmbH & Co KG		
Contact Name:	Philipp Allerstorfer		
Job Title:	COO		
Telephone:	+4373289001822	E-mail:	office@incert.at
Business Address:	Leonfeldnerstraße 328		
ZIP:	4040	City:	Linz
State/Province:		Country:	Austria
Website/URL:			

Approved Scanning Vendor Information

Company:	usd AG		
Contact Name:	PCI Competence Center		
Job Title:			
Telephone:	+49 6102 8631-90	E-mail:	pci@usd.de
Business Address:	Frankfurter Str. 233, Haus C1		
ZIP:	63263	City:	Neu-Isenburg
State/Province:		Country:	Germany
Website/URL:	pci.usd.de		

Scan Status

Date scan completed:	20 March, 2025	Scan expiration date (90 days from date scan completed):	18 June, 2025
Compliance status:	PASS	Scan report type:	Full scan
Number of unique in-scope components scanned:	3		
Number of identified failing vulnerabilities:	0		
Number of components found by ASV but not scanned because scan customer confirmed they were out of scope:	0		

Scan Customer Attestation

INCERT eTourismus GmbH & Co KG attests on 20 March, 2025 that this scan (either by itself or combined with multiple, partial, or failed scans/rescans, as indicated in the above Section A.3, "Scan Status") includes all components which should be in scope for PCI DSS, any component considered out of scope for this scan is properly segmented from my cardholder data environment, and any evidence submitted to the ASV to resolve scan exceptions - including compensating controls if applicable - is accurate and complete.

INCERT eTourismus GmbH & Co KG also acknowledges

- 1) accurate and complete scoping of this external scan is my responsibility, and
- 2) this scan result only indicates whether or not my scanned systems are compliant with the external vulnerability scan requirement of PCI DSS; this scan result does not represent my overall compliance status with PCI DSS or provide any indication of compliance with other PCI DSS requirements.

ASV Attestation

This scan and report was prepared and conducted by usd AG under certificate number 3999-01-19, according to internal processes that meet PCI DSS Requirement 11.3.2 and the ASV Program Guide.

usd AG attests that the PCI DSS scan process was followed, including a manual or automated Quality Assurance process with customer boarding and scoping practices, review of results for anomalies, and review and correction of

- 1) disputed or incomplete results,
- 2) false positives,
- 3) compensating controls (if applicable), and
- 4) active scan interference.

This report and any exceptions were reviewed by Roman Fojtik.

ASV SCAN REPORT SUMMARY

Part 1. Scan Information

Scan customer company:	INCERT eTourismus GmbH & Co KG	ASV Company:	usd AG
Date scan was completed:	20 March, 2025	Scan expiration date:	18 June, 2025

Part 2. Component Compliance Summary

Component (IP Address, domain, etc.):	185.117.251.224/professional.incertapi.com	PASS
Component (IP Address, domain, etc.):	212.83.34.225/professional.myincert.com	PASS
Component (IP Address, domain, etc.):	212.83.35.158/asvscan.myincert.com	PASS

Part 3a. Vulnerabilities Noted for each Component

Component	Vulnerabilities Noted per Component	Severity Level	CVSS Score	Compliance Status	Exceptions, False Positives, or Compensating Controls (Noted by ASV for this Vulnerability)
185.117.251.224 professional.incertapi.com	34020 - UDP Source Port Pass Firewall	■ MED	5	PASS	Feedback from our hosting provider indicates that this is a false positive and not an exploitable vulnerability: Because you typically cannot expect a response with UDP, the external proof of a service's existence is only possible if a response is actually received. This is no longer the case in the systems where the vulnerability was demonstrated. When you scan an IP address (assuming nmap is used), nmap cannot determine the status of the UDP connection as long as no response is received. In the end, nmap will always assume that a UDP port is open. If data is returned for the sent packet, the service is considered reachable and the status is shown as OPEN. If no service responds, the cause is not clear: The service exists but does not respond The service does not exist As a result, nmap will always report the port as "filtered."
185.117.251.224 professional.incertapi.com	42432 - Possible Scan Interference	■ MED	4	PASS	The web server of these components is accessible on port 443 (confirmed by the USD support team and their log analysis, meaning it is not being blocked by the firewall). The application running on this component is identical to the one on the other two components, so there can be no hidden vulnerabilities behind it, as the other two components were scanned without identifying any critical vulnerabilities.
185.117.251.224 professional.incertapi.com	82003 - ICMP Timestamp Request CVE-1999-0524	■ LOW	2.1	PASS	
212.83.34.225 professional.myincert.com	82003 - ICMP Timestamp Request CVE-1999-0524	■ LOW	2.1	PASS	
212.83.35.158 asvscan.myincert.com	82003 - ICMP Timestamp Request CVE-1999-0524	■ LOW	2.1	PASS	

Part 3b. Special Notes to Scan Customer by Component

Component	Special Note to Scan Customer	Item Noted	Per section 7.2 of the ASV Program Guide, scan customer's description of action taken and declaration that software is either needed for business and implemented securely or removed
-	Load Balancer	load balancer	ja
-	Payment page scripts detected	Payment page scripts	Payment page scripts have been implemented securely. Wird so von den PSP gefordert

Part 3c. Special Notes - Full Text

Note

Load Balancer

Scan Customer validates that the configuration of the environment behind the used load balancers is synchronized. It is the scan customer's responsibility to ensure that the environment is scanned as part of the internal vulnerability scans required by the PCI DSS.

Payment page scripts detected

Special Note to Scan Customer: Due to increased risk to the cardholder data environment when payment page scripts are present, 1) justify the business need for the script(s) to the ASV and confirm it is implemented securely, or 2) confirm it is disabled/removed. Consult your ASV if you have questions about this Special Note.

Embedded links detected

Special Note to Scan Customer: Due to increased risk to the cardholder data environment when embedded links redirect traffic to domains outside the merchant's CDE scope, 1) confirm that this code is obtained from a trusted source, that the embedded links redirect to a trusted source, and that the code is implemented securely, or 2) confirm that the code has been removed. Consult your ASV if you have questions about this Special Note.

Part 4a. Scan Scope Submitted by Scan Customer for Discovery

IP Addresses/ranges/subnets, domains, URLs, etc.

185.117.251.224 / professional.incertapi.com

212.83.34.225 / professional.myincert.com

212.83.35.158 / asvscan.myincert.com

Part 4b. Scan Customer Designated "In-Scope" Components (Scanned)

IP Addresses/ranges/subnets, domains, URLs, etc.

185.117.251.224 / professional.incertapi.com

212.83.34.225 / professional.myincert.com

212.83.35.158 / asvscan.myincert.com

Part 4c. Scan Customer Designated "Out-of-Scope" Components (Not Scanned)

Requires description for each IP Address/range/subnet, domain, URL

-

Please provide feedback on our services to the PCI Security Standards Council.

Download the ASV feedback form here: http://my-pci.usd.de/pub/english/asv_feedback_form_-_client.pdf

SUMMARY OF VULNERABILITIES

Vulnerabilities Total	145	Average Security Risk		3
-----------------------	-----	-----------------------	--	---

Ordered by Severity

Severity	Confirmed	Potential	Information Gathered	Vulnerabilities Total
1	3	1	124	128
2	0	0	12	12
3	1	0	4	5
4	0	0	0	0
5	0	0	0	0
Total	4	1	140	145

Ordered by PCI Severity

PCI Severity	Confirmed	Potential	Vulnerabilities Total
Low	3	0	3
Medium	1	1	2
High	0	0	0
Total	4	1	5

APPENDIX

Overall Scan Duration

9 hours, 14 minutes, 52 seconds

Scan Start Time

03/19/2025 16:00:39

Option Profile

Payment Card Industry (PCI) Options

Report Legend

Payment Card Industry (PCI) Status

The Detailed Results section of the report shows all detected vulnerabilities and potential vulnerabilities sorted by host. The vulnerabilities and potential vulnerabilities with a PCI status of FAIL caused the host to receive the PCI compliance status FAIL. These vulnerabilities and potential vulnerabilities must be remediated to pass the PCI compliance requirements. Vulnerabilities with a PCI status of PASS are vulnerabilities that the PCI Compliance service found on the hosts when scanned. Although these vulnerabilities are not in scope for PCI, we do recommend that you remediate the vulnerabilities in severity order.

A PCI compliance status of PASS for a single host/IP indicates that no vulnerabilities or potential vulnerabilities, as defined by the PCI DSS compliance standards set by the PCI Council, were detected on the host. An overall PCI compliance status of PASS indicates that all hosts in the report passed the PCI compliance standards.

A PCI compliance status of FAIL for a single host/IP indicates that at least one vulnerability or potential vulnerability, as defined by the PCI DSS compliance standards set by the PCI Council, was detected on the host. An overall PCI compliance status of FAIL indicates that at least one host in the report failed to meet the PCI compliance standards.

Vulnerability Levels

A vulnerability is a design flaw or mis-configuration which makes your network (or a host on your network) susceptible to malicious attacks from local or remote users. Vulnerabilities can exist in several areas of your network, such as in your firewalls, FTP servers, Web servers, operating systems or CGI bins. Depending on the level of the security risk, the successful exploitation of a vulnerability can vary from the disclosure of information about the host to a complete compromise of the host.

Severity	Level	Description
	1 Minimal	Intruders can collect information about the host (open ports, services, etc.) and may be able to use this information to find other vulnerabilities.
	2 Medium	Intruders may be able to collect sensitive information from the host, such as the precise version of software installed. With this information, intruders can easily exploit known vulnerabilities specific to software versions.
	3 Serious	Intruders may be able to gain access to specific information stored on the host, including security settings. This could result in potential misuse of the host by intruders. For example, vulnerabilities at this level may include partial disclosure of file contents, access to certain files on the host, directory browsing, disclosure of filtering rules and security mechanisms, denial of service attacks, and unauthorized use of services, such as mail-relaying.
	4 Critical	Intruders can possibly gain control of the host, or there may be potential leakage of highly sensitive information. For example, vulnerabilities at this level may include full read access to files, potential backdoors, or a listing of all the users on the host.
	5 Urgent	Intruders can easily gain control of the host, which can lead to the compromise of your entire network security. For example, vulnerabilities at this level may include full read and write access to files, remote execution of commands, and the presence of backdoors.

Severity	Level	Description
	Low	A vulnerability with a CVSS base score of 0.0 through 3.9. These vulnerabilities are not required to be fixed to pass PCI compliance.
	Medium	A vulnerability with a CVSS base score of 4.0 through 6.9. These vulnerabilities must be fixed to pass PCI compliance.
	High	A vulnerability with a CVSS base score of 7.0 through 10.0. These vulnerabilities must be fixed to pass PCI compliance.

Potential Vulnerability Levels

A potential vulnerability is one which we cannot confirm exists. The only way to verify the existence of such vulnerabilities on your network would be to perform an intrusive scan, which could result in a denial of service. This is strictly against our policy. Instead, we urge you to investigate these potential vulnerabilities further.

Severity	Level	Description
	1 Minimal	If this vulnerability exists on your system, intruders can collect information about the host (open ports, services, etc.) and may be able to use this information to find other vulnerabilities.
	2 Medium	If this vulnerability exists on your system, intruders may be able to collect sensitive information from the host, such as the precise version of software installed. With this information, intruders can easily exploit known vulnerabilities specific to software versions.
	3 Serious	If this vulnerability exists on your system, intruders may be able to gain access to specific information stored on the host, including security settings. This could result in potential misuse of the host by intruders. For example, vulnerabilities at this level may include partial disclosure of file contents, access to certain files on the host, directory browsing, disclosure of filtering rules and security mechanisms, denial of service attacks, and unauthorized use of services, such as mail-relaying.
	4 Critical	If this vulnerability exists on your system, intruders can possibly gain control of the host, or there may be potential leakage of highly sensitive information. For example, vulnerabilities at this level may include full read access to files, potential backdoors, or a listing of all the users on the host.
	5 Urgent	If this vulnerability exists on your system, intruders can easily gain control of the host, which can lead to the compromise of your entire network security. For example, vulnerabilities at this level may include full read and write access to files, remote execution of commands, and the presence of backdoors.

Severity	Level	Description
	Low	A potential vulnerability with a CVSS base score of 0.0 through 3.9. These vulnerabilities are not required to be fixed to pass PCI compliance.
	Medium	A potential vulnerability with a CVSS base score of 4.0 through 6.9. These vulnerabilities must be fixed to pass PCI compliance.
	High	A potential vulnerability with a CVSS base score of 7.0 through 10.0. These vulnerabilities must be fixed to pass PCI compliance.

Information Gathered

Information Gathered includes visible information about the network related to the host, such as traceroute information, Internet Service Provider (ISP), or a list of reachable hosts. Information Gathered severity levels also include Network Mapping data, such as detected firewalls, SMTP banners, or a list of open TCP services.

Severity	Level	Description
	1 Minimal	Intruders may be able to retrieve sensitive information related to the host, such as open UDP and TCP services lists, and detection of firewalls.
	2 Medium	Intruders may be able to determine the operating system running on the host, and view banner versions.
	3 Serious	Intruders may be able to detect highly sensitive data, such as global system user lists.
